

Marmik Vyas

Generative AI - Full Stack Developer

Ph : 8200216752 | [Gmail](#) | [GitHub](#) | [LinkedIn](#)

Career Objective

Generative AI-focused developer with experience building real-world AI applications using Python for RAG pipelines and modern LLM tools, along with MERN stack for backend and full-stack development. Skilled in working with APIs, embeddings, and vector databases. Passionate about developing practical AI solutions, improving system performance, and continuously learning through building end-to-end AI products.

Technical Skills

- **Frontend:** React.js, JavaScript, TypeScript, Next.js, HTML, CSS, Tailwind, Bootstrap
 - **Backend:** Node.js, Express.js (MVC Architecture), Python, Django, Flask, RESTful APIs, Firebase
 - **Database:** MongoDB, PostgreSQL, MySQL, AWS RDS
 - **Generative AI:** RAG (Retrieval-Augmented Generation), LangChain, LLM Integration, Prompt Engineering, Vector Databases, Embeddings, Text Chunking, Semantic Search, Tools Calling
 - **Cloud & Deployment:** AWS EC2, AWS S3, AWS RDS, AWS Elastic Beanstalk, Render, Railway, Cloudinary
 - **Tools & Platforms:** Git, GitHub, Postman, Thunder Client, VS-Code
-

Projects

AI Interview Generator

TechStack: MERN, Python, FastAPI, LangChain, ChromaDB, Groq, HuggingFace Embeddings, RAG

- Built an AI-powered interview generator system that compares resumes with job descriptions using a RAG pipeline
- Implemented PDF ingestion with semantic chunking and vector embeddings stored in Chroma vector database
- Generated match percentage, missing skills, and tailored technical + HR interview questions using LLM
- Developed REST APIs for resume upload and job-based analysis using FastAPI

YouTube AI Chat Assistant

Tech Stack: MERN, Python, FastAPI, LangChain, Groq, Cohere, FAISS, RAG

- Built an AI-powered application to chat with any YouTube video using transcript-based RAG pipeline
- Implemented video summarization, key point extraction, explanations, and notes generation
- Added multilingual transcript support with automatic translation to English
- Designed responsive chat-style UI with real-time AI responses

Chatty - Real-Time Chat Application

Tech Stack: MERN Stack, Socket.IO, JWT Authentication, Tailwind CSS

- Built a **real-time chat application** enabling instant messaging between users using **Socket.IO** for bi-directional communication.
- Implemented **user authentication and authorization** using JWT to ensure secure message exchange.
- Designed an intuitive **responsive UI** with Tailwind CSS for a smooth and modern chat experience.
- Integrated **live user status**, **typing indicators**, and **message delivery confirmations**

using socket events.

- Structured backend with **Node.js and Express**, and managed data with **MongoDB** for storing users and chat history efficiently.
- Focused on scalability and clean architecture to support future extensions like group chats and media sharing.

SwachhSnap App - Google Developer Group (GDG) Hackathon Project

Tech Stack: TypeScript, Firebase Authentication, Firebase Firestore, Cloudinary, Tailwind CSS, HTML5, Geolocation API

- Implemented **role-based authentication** (Citizen, Sweeper, Admin) using Firebase Auth
- Built **geo-tagged complaint reporting** with camera access and GPS location
- Designed **admin dashboard** for task assignment, status tracking, and approval workflow
- Enabled sweepers to upload **after-cleanup proof images** using Firebase Storage
- Used **Firestore** for real-time, scalable, and persistent data management
- Developed clean, responsive UI using **Tailwind CSS**

Achievements

- Successfully deployed full-stack applications using Render, Railway, Vercel
- Built and tested secure authentication flows with email verification
- Integrated state management using React Context API

Education

Bachelor of Technology (B.E) - Information Technology

SVIT VASAD, India | July-2023 - July 2027

CGPA - 8.53
